---

**New Tangelos**—Lake, Minneola and Seminole. Superb quality. Becoming very popular. Many progressive growers are making plantings on rough lemon and sour orange rootstock.

LAKE—Very early—October and November—Good color and quality. Destined to be very popular.

MINNEOLA—Very highly colored—Beautiful fruit—Reddest of all tangelos. Ripens November to January.

SEMINOLE—Uniform, deep orange color. Very juicy—Highest quality. Ripens January to March.

**Pink Grapefruit**—Growers are now planting the “Pinks” to secure the higher prices they are bringing on the market. WATCH THEM INCREASE.

**Persian Seedless Limes**—From especially heavy bearing parent trees in our own groves.

**Perrine Lemons**—The best commercial lemon for Florida. On rough lemon and Cleo stock.

*Our trees were not injured by the January freeze. They are in a protected location but the groves were fired throughout the cold spell to prevent any possible damage.*

***Our Careful Budwood Selection Produces Superior Trees***
